MILITARS C.F., Inoue T., Lucus A.-M., Zanotto P., Roy P.;
"The complete sequence of four major structural proteins of African horses sickness virus serotype 6: evolutionary relationships within and between the orbitituses.";
Virus Res. 53:53-73(1998).
--- FOWTION: THE VP3 PROTEIN IS ONE OF THE FIVE PROTEINS (WITH VP1, VP4, VP6 AND VP7) WHICH FORM THE INNER CAPSID OF THE VIRUS.
--- SIMILARITY: BELONGS TO THE REOVIRUSES VP3 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 905;

TITE OF INVENTION: Sequence-Determined DNA Fragments and Corresponding Polypeptic.
TITLE OF INVENTION: Thereby
FILE REFERENCE: 2750-0876P
CURRENT FILING DATE: 2000-05-18
CURRENT FILING DATE: 2000-05-18
SEQ ID NO 1083
LENGTH: 814
SEQ ID NO 1083
TYPE: RFT
CORGANIEM: Arabidopsis thaliana
SEQ ID NO 1083
